IDEATION PHASE

Brainstorm & Idea Prioritization Template

Date	25 September 2026
Team ID	SWTID-2026-4307
Project Name	AI Weather Wise API
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization:

The AI Weather Wise API project focuses on providing weather information through an easy-to-use API service. The team brainstormed different ideas to make weather data more useful, accessible, and understandable for users. Ideas were discussed openly and grouped based on their purpose, importance, and usefulness.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

The team gathered to identify a common problem related to accessing and understanding weather information. Existing weather information can sometimes be difficult to integrate into applications or understand quickly. The team selected the following problem statement:

Problem Statement:

To develop an AI-based Weather Wise API that provides weather information in a simple, reliable, and application-friendly format, helping users and developers access useful weather data easily.

Step-2: Brainstorm, Idea Listing and Grouping

No.	Idea	Description
1	Real-Time Weather Data	Provide current weather information such as temperature, humidity, wind speed and weather condition.
2	Location-Based Weather	Allow applications to request weather information using a city location or coordinates.
3	Weather Forecast	Provide forecast information to help users understand upcoming weather conditions.
4	AI Weather Insights	Use AI-based processing to convert weather data into simple and understandable insights.
5	Weather Alerts	Provide alerts for important weather conditions such as heavy rain, storms or extreme temperatures.
6	Developer-Friendly API	Return structured API responses such as JSON so that developers can easily integrate

		the service.
7	Weather Dashboard Support	Allow the API data to be used by websites, mobile applications and dashboards.
8	Historical Weather Data	Support access to previous weather information when available for analysis and comparison.

Step-3: Idea Prioritization

The ideas were prioritized based on usefulness, feasibility, user benefit, and importance to the AI Weather Wise API. The team selected the core features that can be implemented effectively in the project.

Priority	Idea	Priority Level	Reason
1	Real-Time Weather Data	High	Core feature required to provide current weather information.
2	Location-Based Weather	High	Makes the API useful for different locations.
3	Weather Forecast	High	Helps users understand upcoming weather conditions.
4	AI Weather Insights	High	Adds an AI-based layer for simple weather interpretation.
5	Weather Alerts	Medium	Useful for important or changing weather conditions.
6	Developer-Friendly API	High	Makes integration with applications easier.
7	Weather Dashboard Support	Medium	Helps present API information visually.
8	Historical Weather Data	Medium	Useful for comparison and analysis when data is available.

Final Selected Concept

The final concept is an AI Weather Wise API that combines weather data with AI-based insights. The API will be designed to provide useful weather information in a structured format that can be integrated into web applications, mobile applications, and other software systems.

Expected Benefits

Easy access to weather information.

Simple and structured API responses.

Useful for web and mobile application development.

AI-based interpretation can make weather information easier to understand.

Supports location-based weather information and forecasts.

Can provide useful alerts for important weather conditions.
