Brainstorm & Idea Prioritization

AI WeatherWise is an intelligent weather forecasting and recommendation system. The project focuses on providing real-time weather information and generating useful AI-based weather summaries and insights.

Technology / Flow

JWT Authentication → MongoDB → OpenWeatherMap Weather Data → Gemini AI → AI Weather Summary → Final API Response

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Problem Statement: Users often receive raw weather information without a simple, personalized explanation. The project aims to provide weather data together with an AI-generated summary and useful recommendations through an API.

Team Collaboration: Team members discuss weather-data collection, API development, authentication, database management, AI integration, testing and presentation.

Step-2: Brainstorm, Idea Listing and Grouping

Idea	Description
Real-time Weather API	Fetch current weather information using OpenWeatherMap.
AI Weather Summary	Use Gemini AI to convert weather data into an easy-to-understand summary.
Weather Recommendations	Provide practical suggestions based on the available weather conditions.
JWT Authentication	Secure API access using JWT-based authentication.
MongoDB Storage	Store required user/application data in MongoDB.
Integrated API Response	Combine weather data and AI-generated insights into the final API response.

Step-3: Idea Prioritization

Priority	Idea	Reason
1	Real-time Weather API + AI Summary	Core functionality of the project and directly supports the main objective.
2	Weather Recommendations	Makes the output more useful and actionable for users.
3	JWT Authentication	Provides secure access to the API.
4	MongoDB	Supports storage of application data.
5	Integrated Final API Response	Combines the project components into a single useful response.

Conclusion

The brainstorming and prioritization process identifies the main requirements of AI WeatherWise and organizes them into a practical development plan for delivering intelligent weather forecasts and insights.
