Customer Journey Map

Date	25 September 2026
Team ID	SWTID-2026-4307
Project Name	AI Weather Wise API
Maximum Marks	2 Marks

Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1: Discovery & Exploration	Stage 2: Integration & Testing	Stage 3: Production & Optimization
Actions ***What does the customer do?***	• Searches for weather APIs with AI predictions. • Reads developer documentation and endpoint details. • Registers for a free API key trial.	• Integrates weather API endpoints into app backend. • Tests real-time and predictive weather payloads. • Handles API error responses and latency checks.	• Deploys app with AI Weather Wise API to production. • Monitors API response times and usage limits. • Upgrades to enterprise/ paid tier for higher limits.
Touchpoint ***What part of the service do they interact with?***	• Developer Landing Page • API Documentation Portal • Registration & Sign-up Page	• API Key Management Dashboard • REST API Endpoints & Webhooks • Postman Collection & SDKs	• Developer Analytics Dashboard • Automated Email Alerts / Usage Reports • Technical Support & Helpdesk
Customer Thought ***What is the customer thinking?***	• "Does this API give predictive insights or just raw weather data?" • "Is the API documentation clear and easy to follow?"	• "Are the API responses fast and structured properly?" • "How easy is it to process the AI recommendations in my code?"	• "Is the API reliable during high traffic spikes?" • "Is the pricing scaling well with my user base growth?"
Customer Feeling ***What is the customer feeling?***	Curious, hopeful, cautious	Focused, determined, slightly anxious	Satisfied, confident, reassured
Process Ownership ***Who is in the lead on this?***	Marketing & Product Documentation Team	API Engineering & Developer Relations (DevRel) Team	Customer Success & Infrastructure Ops Team

Phase of Journey	Stage 1: Discovery & Exploration	Stage 2: Integration & Testing	Stage 3: Production & Optimization
Opportunities ***How can we improve this stage?***	• Provide interactive API playground / sandbox directly in docs. • Add clear code snippets in Python, Node.js, and Curl.	• Offer pre-built SDKs and client libraries. • Provide clearer error codes and diagnostic tips.	• Implement proactive usage notifications before limit caps. • Offer dynamic auto-scaling plans for surge traffic.
